BBT software for insurance

BBTPrenet – Accidents and occupational illnesses. Report them quickly and simply, from wherever they occur.
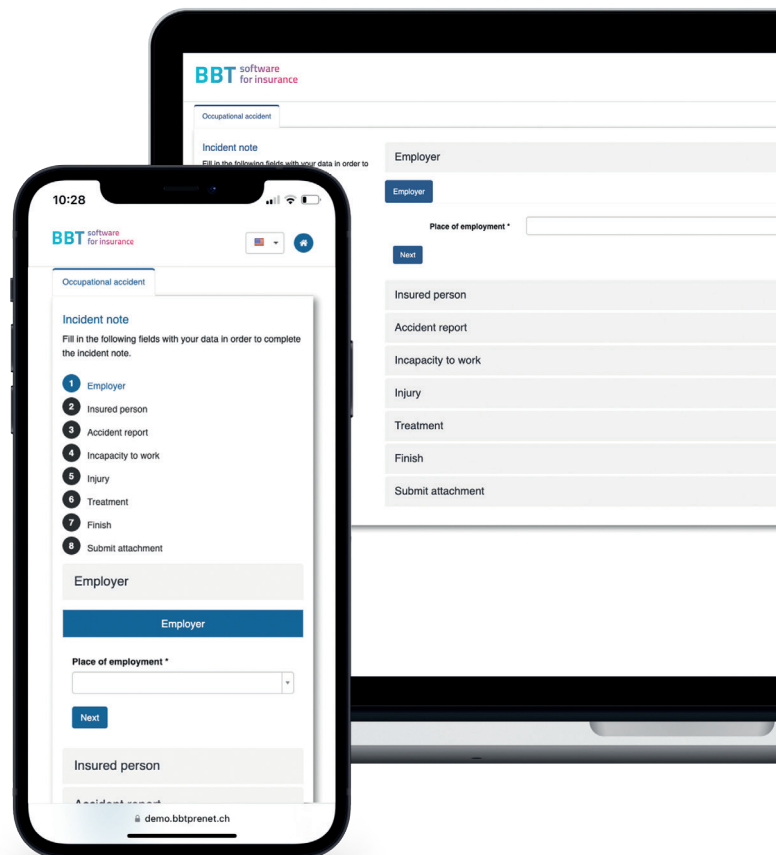

01 Simple templates for employee accidents and occupational illnesses

02 Direct access to the claim form on the web

03 Complete digitisation of the claim reporting process

04 50 to 70 percent time saved in the recording of the claim

05 Fast and cost-effective introduction of the software

BBTPrenet – this is how it works

When employees have an accident and are injured, easy and efficient claim reporting is crucial. With BBTPrenet, employees can quickly enter the accident details of relevance for the insurer simply and independently in a web form. The claim can be logged with complete flexibility from anywhere, via a desktop, a tablet or a smartphone, and sent directly at the click of a button to Sunetplus – the claim and absence management solution for companies.
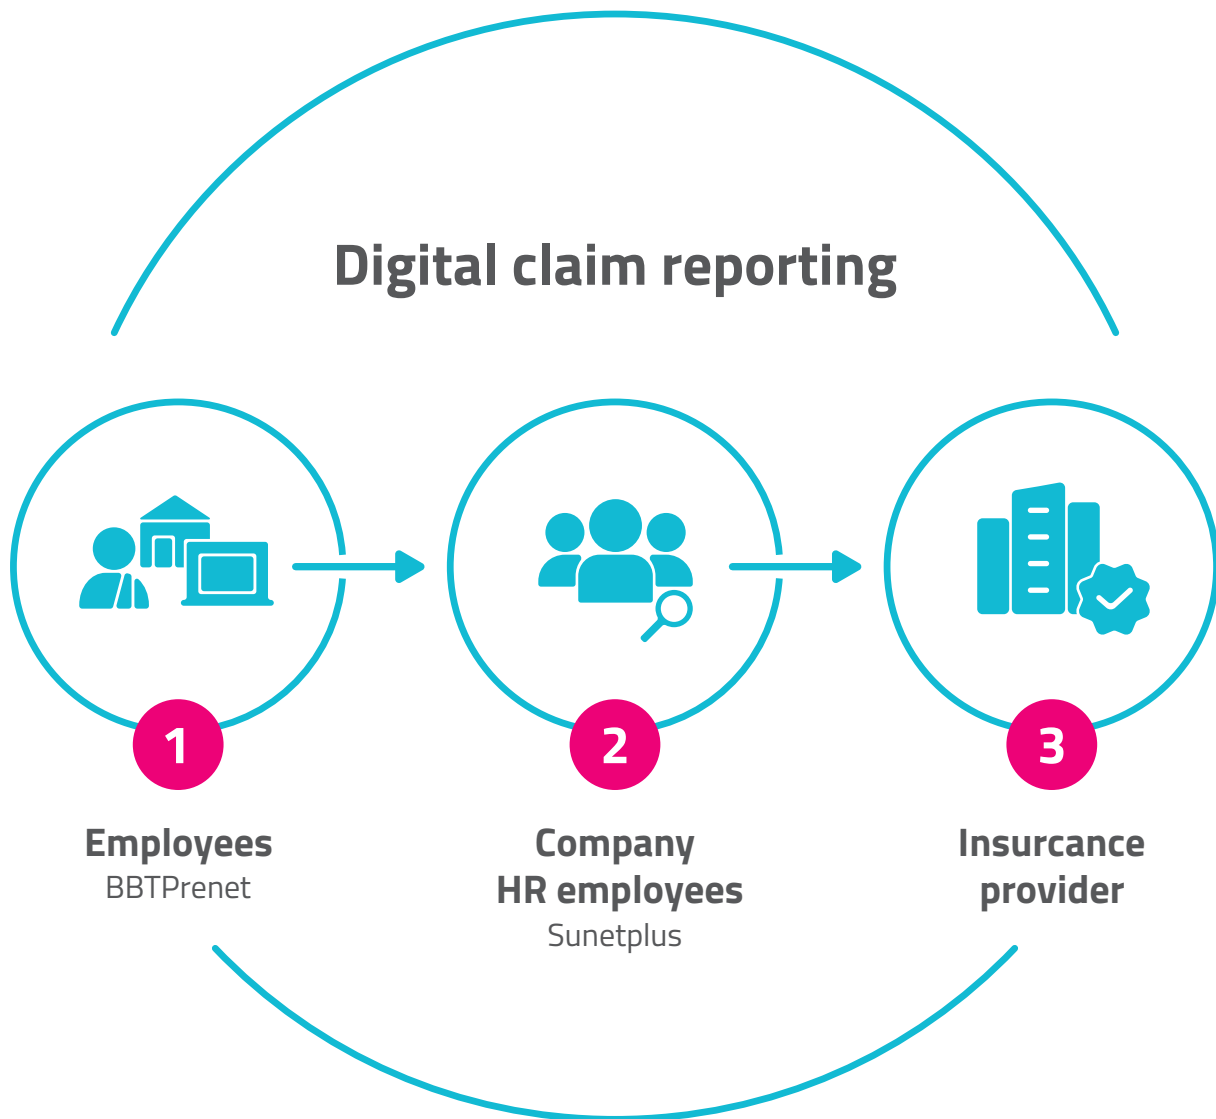

Process optimisation for your company

After the completed web form has been sent, the HR department receives an e-mail notification. Then the received data is imported into Sunetplus and automatically supplemented with already available personal data, such as employment and salary details. Subsequently, the HR department can check the claim again and amend it if necessary, before passing it on to the insurer. This procedure enhances the efficiency of HR departments in the claim reporting process and significantly reduces operating costs.

Data protection and security

- BBT Software AG is ISO/IEC 27001 certified
- BBTPrenet complies with the statutory data protection and data security regulations
- BBTPrenet stores data only temporarily: The customer collects the data periodically from BBTPrenet and imports it into Sunetplus (with Sunetplus, data retention is entirely up the customer)
- Access to BBTPrenet is protected by TLS 1.2 (together with Forward Secrecy) or a newer encryption system (depending on the browser)
